

Kitsada Khamnaun (กฤษฎา คำนวน)

Junior Software Engineer | Cybersecurity & AI Enthusiast

Tel: +66 96-196-9105 | Email: gong.sn.ix.ii.dev@gmail.com | GitHub: github.com/gong-sn-ix-ii Location: Chonburi, Thailand
| Open to: Chonburi / Bangkok (On-site or Hybrid)

PERSONAL PROFILE

I am a fresh-graduate Computer Science (GPA 3.60, RMUTTO) with production-grade experience in Full-Stack web development and cross-platform mobile development. Over a six-month freelance period (May - November 2025), I worked on both a long-term real-time mobile application (auction marketplace with social media features) and websites for clients.

My passion for Cybersecurity has been formally recognized: my "**Cybersecurise**" anti-fraud mobile application was selected as a **National Finalist of NSC 2024** (National Software Contest organized by NECTEC under NSTDA), with project development funding awarded. My interest in Artificial Intelligence is demonstrated through ranking **8th place in AI Engineer Prompt Hackathon 2024** (awarded "AI Engineer" title) and a self-built NLP-based Scam SMS Detection System. I also competed in **Thailand Cyber Top Talent 2024** Capture The Flag (CTF) competition.

I am actively seeking a Junior Software Engineer position at a Cybersecurity, AI, or technology company in **Bangkok or Chonburi**. My career strategy is to begin contributing my proven Full-Stack and Mobile development skills to a security or AI organization while learning the specialty on-the-job, with the goal of transitioning into a dedicated Application Security Engineer or AI Engineer role within 2-3 years.

CAREER OBJECTIVE

Junior Software Engineer position at a Cybersecurity, AI, or technology-focused company in **Bangkok or Chonburi**. Long-term goal: transition into Application Security (AppSec) Engineering or AI Engineering within 2-3 years through on-the-job learning and professional certifications (CompTIA Security+, eJPT).

EDUCATION

Bachelor of Science in Computer Science · GPA 3.60 **Rajamangala University of Technology Tawan-ok (RMUTTO)** · Graduated 2025 **Focus areas:** Cybersecurity, Software Engineering, Artificial Intelligence / Machine Learning

Relevant Coursework: Data Structures and Algorithms, Database Systems, Computer Networks, **Network Security, Cybersecurity, Web Application Security**, Software Engineering, Web Application Development, Mobile Application Development, Artificial Intelligence and Machine Learning, Operating Systems

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Python 3, Dart, Kotlin, SQL

Frontend Development: React 19, Tailwind CSS, HTML5, CSS3, Vite, Framer Motion, React Router

Backend Development: Node.js, Express.js, REST API design, JWT Authentication, Session Management

Mobile Development: Flutter, Dart, Kotlin (Android Native), Android SDK, Material Design

Database & Storage: PostgreSQL, MySQL, Firebase (Firestore, Auth, Storage)

Artificial Intelligence & Machine Learning: Python (Pandas, NumPy, scikit-learn), Jupyter Notebook, Natural Language Processing (NLP), Text Classification, Feature Engineering, **Prompt Engineering** (AI Engineer Prompt Hackathon 2024 award winner), LLM Integration, OpenAI API, Anthropic Claude API

Cybersecurity: **NSC 2024 National Finalist (Cybersecurity)**, OWASP Top 10, Capture The Flag (Thailand Cyber Top Talent 2024), Web Application Security fundamentals (XSS, SQL Injection, CSRF, Authentication), Secure Coding Practices

Game Development: GameMaker Studio (educational games)

Tools & Deployment: Git, GitHub, GitHub Actions (CI/CD), Postman, Render, Hostinger, Vercel, VS Code, Android Studio, Jupyter

Soft Skills: Self-directed learning, problem-solving, written technical communication (Thai), willingness to learn new domains, competitive engineering mindset

PROFESSIONAL EXPERIENCE

Royal Thai Navy — Military Conscription Service

November 2025 – May 2026 · Honorably discharged 1 May 2026

Completed mandatory military service in the Royal Thai Navy as required by Thai law for male citizens.

Skills Developed: Discipline, teamwork in structured environments, responsibility, time management, working under directive leadership, physical and mental endurance.

Self-Employed — Freelance Full-Stack Developer

May 2025 – November 2025 · Remote (6 months)

End-to-end ownership of a long-term real-time mobile application and websites for clients.

Key Responsibilities: - Engaged with clients to gather requirements, propose technical solutions, and produce time and cost estimates - Designed system architecture including database schemas, API contracts, and component hierarchies - Built responsive websites using React, TypeScript, and Tailwind CSS - Developed cross-platform mobile applications using Flutter and Firebase for real-time features - Implemented Full-Stack backend with Node.js, Express, and PostgreSQL - Implemented secure authentication, authorization, and input validation following OWASP secure coding guidelines - Deployed applications to production environments (Render, Hostinger) using GitHub Actions - Provided post-launch support, bug fixes, and feature enhancements

Technologies Used: React, TypeScript, Tailwind CSS, Node.js, Express, PostgreSQL, Flutter, Dart, Firebase, Git, GitHub Actions, Render, Hostinger

Eastern IT Sriracha — IT Support Intern

May 2022 – November 2022 · Chonburi, Thailand (6 months)

Provided technical support for hardware, software, and network issues to small and medium business clients in the Sriracha area.

Key Responsibilities: - Diagnosed and resolved hardware issues across desktop computers, laptops, and peripheral devices - Configured and installed operating systems (Windows), productivity software, and basic security tools - Assisted in network setup including basic router configuration - Performed virus and malware removal - Built personal programming projects in parallel to strengthen software engineering fundamentals

Government Savings Bank, Borwin Branch — Loan Credit Intern

November 2020 – February 2021 · Chonburi, Thailand (4 months)

Assisted the loan credit team in processing credit applications and verifying customer financial information.

Key Responsibilities: - Verified credit bureau (NCB) reports against loan application data - Processed and validated financial documentation including income statements - Maintained strict confidentiality and data privacy standards - Gained exposure to financial compliance, data privacy regulations, and operational risk management

FEATURED PROJECTS

Cybersecurise — Anti-Fraud Mobile Application (NSC 2024 National Finalist)

Domain: Cybersecurity / Anti-Fraud / Mobile Application **Technologies:** Kotlin, Dart, Flutter, Firebase **Recognition:** National Finalist, National Software Contest (NSC) 2024 by NECTEC/NSTDA; project development funding awarded

A comprehensive mobile application designed to protect Thai consumers from scammers and online fraud. The app provides multiple layers of defense for everyday users.

Key Features: - **Dangerous Settings Scanner:** Scans device settings that may expose users to fraud risk and recommends secure configurations - **SMS Scam/Spam/OTP Detection:** Automatically classifies incoming SMS messages as legitimate, scam, spam, or OTP — alerting users to suspicious messages - **Security Knowledge Quiz:** Interactive quiz to educate users on common scam patterns and security best practices - **Blacklist Lookup:** Allows users to check bank account numbers, phone numbers, and names against blacklist databases via integrations with CheckGon and ChaladOhn

Technical Highlights: - Cross-platform mobile development supporting Android (Kotlin) and Flutter for unified UI - Firebase backend for user authentication, data storage, and real-time updates - Integration with external blacklist services (CheckGon, ChaladOhn) via API - Applied OWASP Mobile Top 10 secure coding practices

Skills Demonstrated: Mobile Development, Cybersecurity Application Design, API Integration, Anti-Fraud Engineering, Secure Coding

AI Engineer Prompt Hackathon 2024 — 8th Place (Awarded "AI Engineer")

Domain: Artificial Intelligence / Prompt Engineering **Technologies:** OpenAI API, Anthropic Claude API, Prompt Engineering, LLM Integration

Designed and implemented advanced prompt-engineered solutions during a national-level Hackathon focused on AI Prompt Engineering, achieving 8th place and being awarded the "AI Engineer" title.

Technical Highlights: - Applied advanced prompt engineering techniques including Chain-of-Thought reasoning, Few-shot learning, Role prompting, and Output structuring - Integrated LLM APIs to solve real-world problem statements presented in the competition - Demonstrated ability to design, iterate, and optimize prompts under time pressure

AI Scam SMS Detection System

Domain: Artificial Intelligence x Cybersecurity (Fraud Detection) **Technologies:** Python, Pandas, NumPy, scikit-learn, Jupyter Notebook, NLP

A machine learning system that classifies SMS messages as legitimate or fraudulent (scam/spam) using NLP techniques. This research/model project complements the SMS detection feature in the Cybersecurise mobile application.

Technical Highlights: - Built end-to-end ML pipeline including data ingestion, text preprocessing, feature engineering (TF-IDF, n-grams), model training, and evaluation - Experimented with multiple classification algorithms and selected best-performing model based on F1 score - Demonstrates the practical intersection of Artificial Intelligence and Cybersecurity

Boundless — Real-Time Auction & Social Media Mobile App

Domain: Full-Stack Mobile Application with Real-Time Features **Technologies:** Flutter, Dart, Firebase, PostgreSQL, Node.js

Production-grade real-time mobile application combining auction marketplace with social media features, delivered as freelance work.

Technical Highlights: - Real-time bidding system with optimistic UI updates and conflict resolution - Social media features including user profiles, follow/unfollow, posts, comments, likes - Cross-platform Flutter development supporting Android and iOS - Database design including normalization, indexing, and query optimization

Scifare Adventure — Educational Game

Domain: Game Development / Educational Software **Technologies:** GameMaker Studio

Educational game combining science learning with interactive gameplay, designed to make learning engaging for students.

Technical Highlights: - Game design with progression mechanics and educational content - 2D graphics, animations, and game logic implemented in GameMaker Studio - Demonstrates ability to work in different programming paradigms (event-driven game development)

Thailand Cyber Top Talent 2024 — Capture The Flag

Active participant in CTF competition, solving challenges across multiple domains:

- **Web Exploitation:** Identifying and exploiting common web vulnerabilities
- **Cryptography:** Solving classical and modern cryptographic puzzles
- **Reverse Engineering:** Analyzing binaries to understand program behavior
- **Digital Forensics:** Analyzing artifacts to recover hidden information

AWARDS & RECOGNITION

NSC 2024 — National Software Contest (NECTEC, NSTDA) — National Finalist

Project: Cybersecurise — Anti-Fraud Mobile Application **Recognition:** National Finalist in Cybersecurity / Software Innovation category **Award:** Project development funding granted by NECTEC/NSTDA **Significance:** NSC is one of Thailand's most prestigious annual student software contests. National finalist status places the project among the top student software projects in Thailand for 2024.

AI Engineer Prompt Hackathon 2024 — 8th Place (Awarded "AI Engineer")

Skills Demonstrated: Advanced Prompt Engineering, LLM application design, generative AI integration **Significance:** Top 10 ranking in a national competition focused on Prompt Engineering, one of the most in-demand AI skills in 2025-2026

Thailand Cyber Top Talent 2024 — Capture The Flag (CTF)

Active participant solving challenges in Web Exploitation, Cryptography, Reverse Engineering, and Forensics.

ICPC 2024 — International Collegiate Programming Contest, Thailand Regional

Algorithmic problem-solving competition requiring data structures, graph algorithms, dynamic programming, and mathematical reasoning.

CONTINUOUS LEARNING PLAN

Year 1 (2026 - 2027): - CompTIA Security+ certification - OWASP Top 10 hands-on practice (TryHackMe, HackTheBox) - LLM integration patterns: RAG, AI Agents — building 2-3 production-grade AI projects - Improve English reading and conversational ability through daily practice

Year 2 (2027 - 2028): - eJPT (eLearnSecurity Junior Penetration Tester) certification - Bug Bounty participation (HackerOne, BugCrowd)

Year 3+ (2028+): - OSCP (Offensive Security Certified Professional) - AI Security specialization

LANGUAGES

- **Thai:** Native proficiency
 - **English:** Limited — basic reading of technical documents and code; speaking and writing under development through ongoing practice
-
