

Kitsada Khamnuan (กฤษฎา คำนวน)

Junior Mobile Developer · Flutter & Android Native

Tel: +66 96-196-9105 | Email: gong.sn.ix.ii.dev@gmail.com | Location: Chonburi, Thailand (open to Bangkok) GitHub: github.com/gong-sn-ix-ii | LinkedIn: linkedin.com/in/kitsada-khamnuan-2a6729407 | Portfolio: gong-ix-ii-dev.com

PERSONAL PROFILE

I am a fresh Computer Science graduate (GPA 3.60, RMUTTO) positioning as a **Junior Mobile Developer** specializing in **Flutter** and **Android Native (Kotlin)**, with hands-on experience shipping cross-platform production mobile applications end-to-end. During a focused six-month freelance period before mandatory military service (May - November 2025), I delivered **Boundless** — a real-time auction marketplace with social media features — on Flutter / Firebase as a cross-platform Android + iOS release, while supporting client web projects in parallel.

My Android-native depth is formally recognized: my "**Cybersecurise**" application, built in Kotlin (Android Native) with a Python / FastAPI backend, was selected as a **National Finalist of NSC 2024** (National Software Contest by NECTEC / NSTDA), with project development funding awarded. The project's complexity — five interacting feature layers, an NLP-backed inference service, and external API integrations — demonstrates that I can architect non-trivial native mobile applications, not just CRUD UIs.

I have also been recognized in other technical contests: **8th place in AI Engineer Prompt Hackathon 2024** (awarded "AI Engineer" title), and competed in **Thailand Cyber Top Talent 2024** CTF and **ICPC 2024** Thailand Regional. These broaden my technical baseline but my career focus is mobile.

I recently completed mandatory military service in the Royal Thai Navy (November 2025 - May 2026) and am actively seeking a Junior Mobile Developer position at a product or technology company in **Chonburi or Bangkok** (Hybrid). My target compensation is **25,000 - 32,000 THB / month** for an entry-level mobile role.

CAREER OBJECTIVE

Junior Mobile Developer role with **Flutter** or **Android Native (Kotlin)** focus, at a product, agency, or technology company in **Chonburi or Bangkok** (Hybrid arrangement). Compensation target: **25,000 - 32,000 THB / month** as a fresh-graduate baseline. Long-term goal: deepen into senior mobile engineering — performance optimization, native interop, modular architecture, and mobile DevOps (CI/CD, Fastlane, beta channels) — and earn certifications in Flutter and Android development as the role allows.

EDUCATION

Bachelor of Science in Computer Science · GPA 3.60 **Rajamangala University of Technology Tawan-ok (RMUTTO)** · Graduated 2025 **Focus areas:** Mobile Application Development, Software Engineering, Cybersecurity, Artificial Intelligence / Machine Learning

Relevant Coursework: Mobile Application Development, Software Engineering, Data Structures and Algorithms, Database Systems, Computer Networks, Web Application Development, Operating Systems, Artificial Intelligence and Machine Learning, Cybersecurity, Web Application Security

TECHNICAL SKILLS

Mobile Development (Primary)

- **Frameworks:** Flutter (Dart) · Android Native (Kotlin)
- **Backend-as-a-Service:** Firebase — Authentication, Firestore (real-time), Cloud Storage, Cloud Messaging (FCM)
- **Platform APIs:** Android SDK, Material Design, AndroidX, lifecycle-aware components
- **Patterns:** REST API integration · real-time data sync · optimistic UI updates · cross-platform Android + iOS delivery (Flutter)
- **Security:** OWASP Mobile Top 10 applied across projects · secure authentication · input validation

Backend (Supporting)

- **Runtimes & Frameworks:** Node.js · Express.js · Python · FastAPI
- **Databases:** PostgreSQL · MySQL · Firebase Firestore

- **API Design:** REST API design · JWT Authentication · Session Management

Frontend (Supporting)

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Stack:** React 19, Tailwind CSS, Vite, Framer Motion, React Router

Infrastructure & DevOps

Git, GitHub, GitHub Actions (CI/CD), Render, Hostinger, Postman, Android Studio, VS Code

AI / ML (Project-Level Exposure)

Python (Pandas, NumPy, scikit-learn), Jupyter Notebook, Natural Language Processing (NLP), Text Classification, TF-IDF / n-gram Feature Engineering, model evaluation (F1, precision/recall), Prompt Engineering, OpenAI API, Anthropic Claude API, LLM Integration

Cybersecurity (Awareness Level)

OWASP Top 10 · OWASP Mobile Top 10 · Secure Coding · CTF participation (Thailand Cyber Top Talent 2024): Web Exploitation, Cryptography, Reverse Engineering, Digital Forensics

Game Development

GameMaker Studio (educational games)

Soft Skills

Self-directed learning, problem-solving, ownership mindset, written technical communication, willingness to learn new mobile frameworks and tooling.

PROFESSIONAL EXPERIENCE

Royal Thai Navy — Military Conscription Service

November 2025 – May 2026 · Honorably discharged 1 May 2026

Completed mandatory military service in the Royal Thai Navy as required by Thai law for male citizens.

Skills Developed: Discipline, teamwork in structured environments, responsibility under directive leadership, time management, physical and mental endurance.

Self-Employed — Freelance Mobile & Full-Stack Developer

May 2025 – November 2025 · Remote (6 months, pre-conscription focus period)

Strategic six-month freelance window before mandatory military service — used the time to ship a long-term production mobile application and supporting web projects, building a verifiable proof-of-work portfolio prior to conscription.

Key Responsibilities & Achievements: - **Shipped Boundless** — production Flutter / Firebase cross-platform auction app (Android + iOS) with real-time bidding and social media features (profiles, follow, posts, comments) - Owned the full mobile development lifecycle: requirement gathering → architecture → Firebase data modeling → UI/UX implementation → release → post-launch support - Engaged directly with clients to gather requirements, propose technical solutions, and produce time/cost estimates - Designed system architecture end-to-end: PostgreSQL schemas, Node.js / Express REST API contracts, Firebase real-time data flows, Flutter widget hierarchies, React component trees - **Built supporting web frontends** (React 19 + TypeScript + Tailwind CSS) with Framer Motion animations - Applied **OWASP Mobile Top 10** secure-coding patterns across every release - Deployed via GitHub Actions automated CI/CD pipelines targeting Render and Hostinger - Provided post-launch support, bug fixes, and feature enhancements driven by client feedback

Technologies Used: Flutter, Dart, Firebase, Kotlin, Android SDK, React 19, TypeScript, Tailwind CSS, Node.js, Express, PostgreSQL, Git, GitHub Actions, Render, Hostinger

Eastern IT Sriracha — IT Support Intern

May 2022 – November 2022 · Chonburi, Thailand (6 months)

Provided technical support for hardware, software, and network issues to small and medium business clients in the Sriracha area. Diagnosed and resolved hardware issues, configured Windows OS and security tools, performed virus/malware removal, and built personal programming projects in parallel to strengthen software engineering fundamentals.

FEATURED PROJECTS

Boundless — Real-Time Auction & Social Media Mobile App (Centerpiece)

Domain: Cross-Platform Production Mobile Application **Technologies:** Flutter, Dart, Firebase (Firestore, Auth, Storage, FCM), PostgreSQL, Node.js / Express **Delivery:** Shipped as freelance work, cross-platform Android + iOS

Production-grade real-time mobile application combining an auction marketplace with social media features. Built end-to-end during the pre-conscription freelance period.

Mobile Engineering Highlights: - **Cross-platform delivery** — single Flutter codebase running on Android and iOS, with platform-aware widgets where needed - **Real-time bidding engine** — Firestore-backed bid stream with optimistic UI updates and conflict resolution to handle concurrent bidders - **Social-feed layer** — user profiles, follow/unfollow, posts, comments, likes — using Firestore composite indexes for feed queries - **Authentication & authorization** — Firebase Auth with role-based access control and protected routes - **State management** — disciplined separation of UI, business logic, and data layers; lifecycle-aware widget tree - **Networking** — REST API integration with custom retry/error handling; Firebase real-time listeners for live data - **Security** — OWASP Mobile Top 10 mitigations: secure token storage, input validation, secure transport

Skills Demonstrated: Flutter/Dart mastery, Firebase architecture, real-time mobile patterns, cross-platform delivery, end-to-end ownership, secure mobile coding.

Cybersecurise — Native Android Anti-Fraud App (NSC 2024 National Finalist)

Domain: Android Native Application · Cybersecurity Use-Case **Technologies:** Kotlin (Android Native), Python / FastAPI, Firebase **Recognition:** National Finalist, National Software Contest (NSC) 2024 by NECTEC / NSTDA; project development funding awarded

A native Android application designed to protect Thai consumers from scammers. Selected as a National Finalist of NSC 2024, recognizing the technical complexity of the Android Native implementation alongside the NLP-backed backend.

Android-Native Engineering Highlights: - Native Android implementation in **Kotlin**, leveraging Android SDK directly (not via a cross-platform abstraction) - Five interacting feature layers in a single Android app: settings scanner, app scanner, SMS classification, security quiz, blacklist lookup - Inter-feature state coordination and lifecycle-aware components - Integration with external REST services (CheckGon, ChaladOhn) via Retrofit-style networking - Pairing with a Python / FastAPI inference backend for NLP-based SMS classification - Firebase backend for user authentication, data storage, and real-time updates - **OWASP Mobile Top 10** secure coding practices applied throughout the codebase

Five Feature Layers: - **Dangerous Settings Scanner:** Scans device settings that may expose users to fraud risk and recommends secure configurations - **Dangerous App Scanner:** Scans installed applications and flags those that may pose security risks - **SMS Scam / Spam / OTP Detection:** Automatically classifies incoming SMS messages (NLP-backed via FastAPI service) - **Security Knowledge Quiz:** Interactive quiz educating users on common scam patterns - **Blacklist Lookup:** Checks bank account numbers, phone numbers, and names against blacklist databases via CheckGon and ChaladOhn

Skills Demonstrated: Kotlin Android Native development, Android SDK depth, native + backend integration, complex Android UX, secure mobile coding.

AI Scam SMS Detection System

Domain: Backend ML Service supporting Mobile App **Technologies:** Python, Pandas, NumPy, scikit-learn, Jupyter Notebook, NLP

Machine learning system that classifies SMS messages as legitimate or fraudulent (scam/spam) using NLP techniques. Deployed as the inference backend powering Cybersecurise's SMS detection feature.

Technical Highlights: - Built end-to-end ML pipeline: data ingestion, text preprocessing, feature engineering (TF-IDF, n-grams), model training, evaluation - Experimented with multiple classification algorithms; selected best-performing model by F1 score - Wrapped trained model behind a FastAPI service consumed by the Cybersecurise Android app

AI Engineer Prompt Hackathon 2024 — 8th Place (Awarded "AI Engineer")

Domain: LLM Application Design / Prompt Engineering **Technologies:** Anthropic Claude API, OpenAI API, Advanced Prompt Engineering

Designed and implemented advanced prompt-engineered solutions during a national-level Hackathon focused on AI Prompt Engineering, achieving **8th place out of all national entrants** and being awarded the "AI Engineer" title (granted to top 10 only).

Technical Highlights: - Applied advanced prompt engineering: Chain-of-Thought reasoning, Few-shot learning, Role prompting, Output structuring - Integrated LLM APIs to solve real-world problem statements under time pressure

Scifare Adventure — Educational Game

Domain: Game Development / Educational Software **Technologies:** GameMaker Studio

Educational game combining science learning with interactive gameplay. 2D graphics, animations, and game logic implemented in GameMaker Studio. Demonstrates ability to work across programming paradigms (event-driven game development).

Thailand Cyber Top Talent 2024 — Capture The Flag

Active CTF competitor across Web Exploitation, Cryptography, Reverse Engineering, and Digital Forensics challenges.

AWARDS & COMPETITIONS

Awards Received

NSC 2024 — National Software Contest (NECTEC, NSTDA) — National Finalist - Project: Cybersecurise — Native Android Anti-Fraud Application (Kotlin) - **Recognition:** National Finalist in Cybersecurity / Software Innovation category - **Award:** Project development funding granted by NECTEC/NSTDA - **Significance:** NSC is one of Thailand's most prestigious annual student software contests. National finalist status validates not only the security concept but the underlying Android-native engineering quality.

AI Engineer Prompt Hackathon 2024 — 8th Place (Awarded "AI Engineer") - Skills Demonstrated: Prompt Engineering, LLM application design, generative AI integration - **Significance:** Top 8 ranking in a national Prompt Engineering competition — "AI Engineer" title awarded only to top 10 finalists.

Competitions Participated

Thailand Cyber Top Talent 2024 — Capture The Flag (CTF) Competitor solving challenges in Web Exploitation, Cryptography, Reverse Engineering, and Forensics.

ICPC 2024 — International Collegiate Programming Contest, Thailand Regional Competitor in algorithmic problem-solving requiring data structures, graph algorithms, dynamic programming, and mathematical reasoning.

LEADERSHIP & ACTIVITIES

President, Sports Affairs — Faculty of Science Student Council, RMUTTO

Elected to lead the sports portfolio for the Faculty of Science student body. Responsibilities included organizing inter-faculty tournaments, allocating and tracking the sports budget, coordinating volunteer teams across multiple departments, and serving as the faculty's representative voice on student-life matters related to athletics.

Skills Demonstrated: Leadership in a peer-elected role, stakeholder coordination across departments, budget management, event planning and execution, public speaking, conflict resolution.

CONTINUOUS LEARNING PLAN

Year 1 (2026 - 2027) — planned: - Deepen Flutter expertise — advanced state management (Riverpod / Bloc), platform channels for native interop, performance profiling - Strengthen Android Native — Jetpack Compose, coroutines/Flow, MVI architecture - Mobile CI/CD — Fastlane, GitHub Actions for mobile builds, internal beta distribution (Firebase App Distribution / TestFlight) - Improve English speaking through daily practice and async-first work environments

Year 2 (2027 - 2028) — planned: - iOS native depth — Swift / SwiftUI fundamentals to complement Flutter cross-platform work - App Store / Play Store release management, store policies, app analytics - Begin contributing to open-source Flutter or Android packages - Pursue mobile-focused certifications if industry-relevant ones emerge

Year 3+ (2028+) — planned: - Senior mobile engineering — modular architecture, performance optimization at scale, mobile observability - Explore mobile security specialization (mobile pentesting, OWASP MASVS) as a long-term differentiator - Mentor junior mobile developers

LANGUAGES

- **Thai:** Native proficiency

- **English:** reads tech docs and code daily; conversational fluency developing
